**3D Streaming Solutions
for the Operating Room**

Broadcast live 3D surgical video from the OR

TrueVision® features the ability to broadcast live procedures in 3D from the operating room to 3D-equipped remote conference rooms and theaters for any size audience ... even to your desktop.

TrueVision® understands that “one size fits all” does not meet the varying needs of different institutions. Learn about different streaming solutions available to fit your particular need.

TrueVision® enables viewers “near and far” to see surgery as if they were performing it themselves.

Integrates easily with other operating room devices and 2D video systems.

3D Operating Room

Telemedicine

Remote Surgeons' Offices

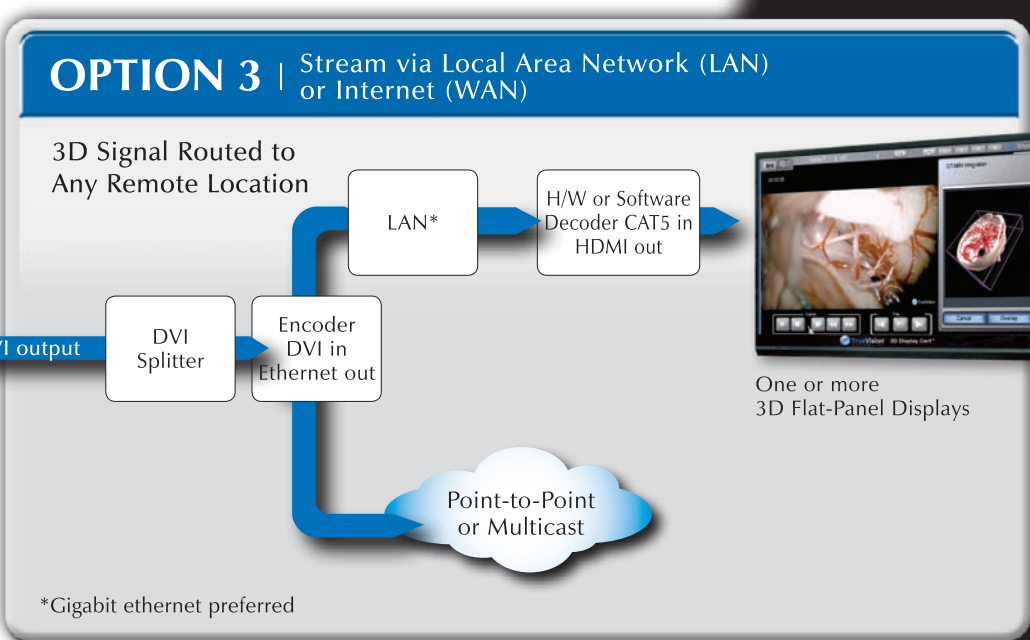

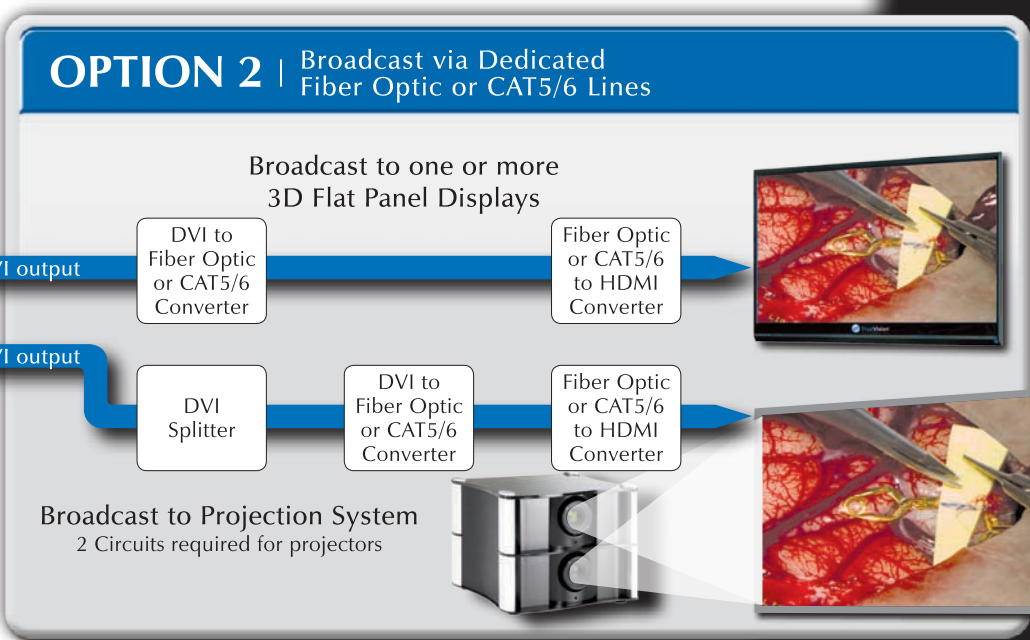

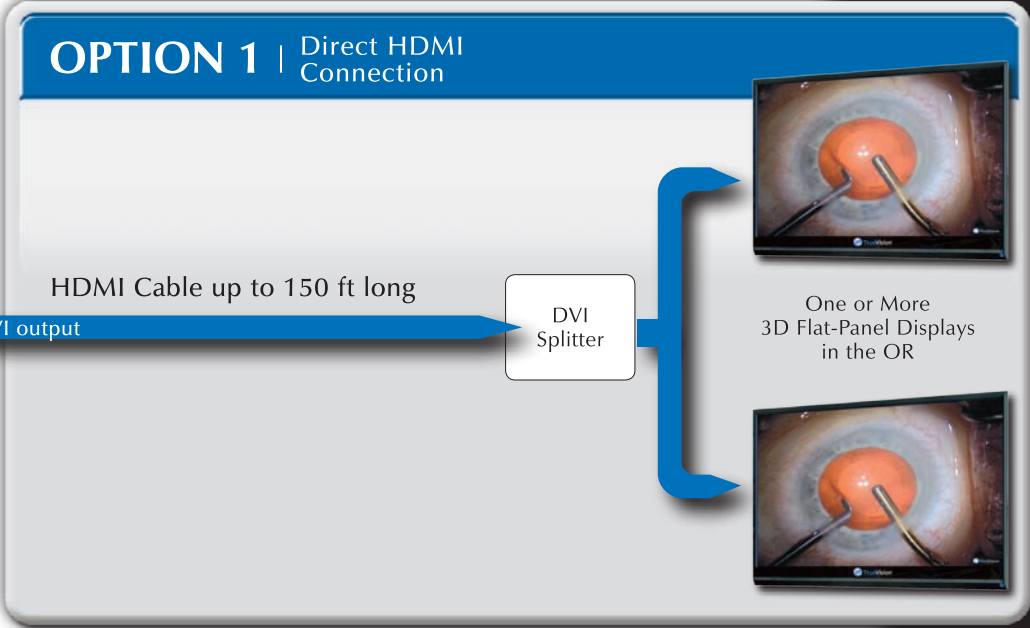

Remote Theater

Remote Conference Room

“We continuously stream live 3D video from the operating room to our conference room across the campus. This enables course participants and staff to view surgical procedures in high quality 3D that matches exactly what I see through the microscope. There is no doubt the value of 3D video is a significant educational advantage over 2D.”

– Ali F. Krisht, MD
Director of Arkansas Neuroscience Institute
at St. Vincent Infirmary Medical Center

THE LEADER IN DIGITAL 3D VISUALIZATION FOR MICROSURGERY
